**DETAILED ACTION**

***Response to Amendment***

1. Applicant's amendment and remarks received 12 September 2008 have been entered and overcome the objection to the title and the claim objections that were recited in the previous office action.

***Drawings***

2. The Examiner notes that the drawings that were received 21 April 2006 are acceptable.

***Allowable Subject Matter***

3. Claims 1-20 are allowed.

4. The following is an examiner's statement of reasons for allowance: Regarding independent claim 1, the prior art of record neither shows a coiled assembly body structure for an electrodeless discharge lamp comprising, in addition to other limitations of the claim, a skeleton-shaped bobbin of a substantially cylindrical shape that includes a side surface and mounted on an outer surface of a pipe-shaped cylinder along an axial direction of the pipe-shaped cylinder, the skeleton-shaped bobbin including an opening extending radially through the skeleton-shaped bobbin at the side surface of the substantially cylindrical shape.

5. The closest prior art of Kenji (JP 2003-257379) to independent claim 1 teaches, in Figures 3 and 6 an electrodeless discharge lamp comprising an airtight container bulb (10) made of a transparent material and enclosing a discharge gas; and a coil assembly

body contained in a hollow portion in the airtight container bulb for generating a high frequency electromagnetic field by conducting a high frequency current in a coil to excite the discharge gas so as to emit light, wherein the coil assembly body comprises a pipe-shaped cylinder (30) formed of a thermal conductor for heat release; a bobbin (20) of a substantially cylindrical shape that includes a side surface and mounted on an outer surface of the pipe-shaped cylinder along an axial direction of the pipe-shaped cylinder; a core (35) of a soft magnetic material; and a coil (36) wound around a surface of the bobbin and the core. However, Kenji fails to exemplify the skeleton-shaped bobbin including an opening extending radially through the skeleton-shaped bobbin at the side surface of the substantially cylindrical shape. Due to their dependencies upon independent claim 1, claims 2-20 are also allowable.

6. The subject coil assembly body described earlier is provided for improving the reliability of the coil insulation and reducing the variation in the lighting performance.

The design is new and unique to the art.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
